

REMARKS

Claims 81 and 88 are amended. Claims 95-110 are added. Claims 81-110 are in the application for consideration.

The specification is amended to correct a typographical error. An Abstract is provided which is directed to the scope of some of the claimed subject matter in this application.

Independent claim 81 is amended to recite that at least one precursor being fed to at least one of the first and second energy application zones is a liquid. Support for the same can be found in Applicant's application as-filed, for example in the specification at p.7, Ins.17-19. Independent claim 88 is amended to recite the feeding of an inert purge gas to the reaction flow path intermediate the first in sequence and the subsequent in sequence energy application zones. Support for the same can be found in the Applicant's application as-filed, for example at p.10, Ins.3-16. Applicant's added dependent claims are likewise supported from the specification as-filed such that none of the amendments made herein, nor any of the added claims, add new matter to the application.

This application is believed to be in immediate condition for allowance.

Respectfully submitted,

Dated: 1-28-04
